

BankersVerse

In our daily jobs, which are spread over different sectors of finance, we noticed the need of new assets for upcoming generations. As bankers, it's fascinating to see the development of decentralization and the possibilities it brings.

We decided to build an asset collection with the main goal of maintaining a passive reward for the investors, additionally building an ecosystem around our assets to maintain the passive rewards.

We didn't invent a new way a token works, but we want to focus primarily on the generation and upkeep of passive rewards with the goal to build an asset and ecosystem our investors want to hold.

The first step, BankersDream

The first steps we are focusing on is the creation of 3 different asset categories, starting with BankersDream.

This token has the goal of providing a reward for holding in form of
PEG BUSD (STABLE COIN).

You will receive PEG BUSD for simply holding the token in your wallet.

How does it work? Every transaction is subject to a tax. One part of the tax is for reflections back to the holders. These reflections are distributed to every wallet holding BankersDream automatically every 60 minutes. You don't need to claim the reward. Once your reward covers the gas fee, it will be sent to your wallet automatically.

As we've stated before, this is not a new concept, but we understand that many people are unaware of the true value such a smart contract can have. With an ecosystem built around this type of asset generating passive rewards, this might be one of the best assets one could have in their portfolio.

The Tokenomics

8% Reflection in PEG BUSD-T to all holders

2% Buyback and burn

4% Marketing / Community fund

1% Liquidity

Anti-whale mechanism, no wallet can hold more than 8%.

BankersWhale

The first community idea which will be implemented into our system is BankersWhale.

1,5% of the marketing tax will be used as a community investment fund. The BankersDream team will use this money with community suggestions to invest in various altcoins and memecoins.

New projects can also reach out to BankersWhale to apply for an AMA with the BankersDream community, in which they can present the idea and receive an early investment from our fund.

75% of the yield generated by our fund will be distributed to our holders, applying the same logic as for the BUSD rewards.

25% of the yield will be kept for further development costs of the ecosystem.

The BankersWhale fund is a risk-free way for our community to generate another form of income.

Only BankersDream Holders will receive the participation in the yield!

The team

Who is part of the Team? This is always an exciting question.

We are currently a team of 4 friends who've known each other since childhood.

All of us were born and raised in Germany.

JM
Creative Director
Insurance Agent

Buka
Chief Financial Officer
Trained Banker

AJ
CEO
Financial Advisor

SImplify
Head Dev
Software Developer

Our goal

Our main goal is building a community and launching our 3 asset classes.

While being invested in other tokens, we quickly learned some things that are tied to the success of a project such as:

Transparency

It is concerning and for some it may be a red flag when a team avoids speaking about certain aspects of the project or answering questions entirely. Our focus towards transparency is straight forward: We have nothing to hide and we will do our best to answer all questions as in depth as possible.

Activity

An active team with the same goals will provide stability and quality project/community building. We look forward to bringing everyone together to make the right decisions on our journey.

Working with the community

This is one of the biggest boosts a project can have. When the team is willing to work with the community, amazing things can happen.

We'd like you to engage with us and let us know your favorite marketing strategies and suggestions on future projects. While we cannot realize every idea that is provided, we will work out the best plays for long term growth. We are striving to create assets which are worth holding for passive rewards and an ecosystem built around these assets to maintain the rewards.

Our future

Of course we need to think of a way to generate the volume for the rewards. That's why we intend to build an ecosystem around our tokens. Our plans are not fix yet, one big idea is a launchpad with a unique protocol. We will decide such things together with the community, it also depends on which way the whole crypto market is going to. If we see a better usecase for our tokens to implement and generate the reflection we will consider switching our plans. This freedom we still have due to being that early is great, so we can build the ecosystem fully on the needs of the crypto community.

For now we are heavily focusing on a good market entry, building a community and marketing campaigns to spread awareness of this asset!

Remember, it's from the people for the people.
